2014 Consumer Confidence Report

Water System Name:	The Sea Ranch Water Company	Report Date:	March 2015
	er quality for many constituents as required results of our monitoring for the period of	•	•
Este informe contiene i	nformación muy importante sobre su ag entienda bien	, <u>-</u>	zcalo ó hable con alguien que lo
Type of water source(s) is	n use: Ground water and surface water		
Name & location of source	ce(s): Hot Spot wells and reservoir and t	reatment plant	
Drinking Water Source Assess:	ment information: A Drinking Water	Source Assessment was l	ast completed by the
State Department of Health Ser	rvices in October 2002. At that time Wells 3(A) and	d 4(B) met all primary and	d secondary standards.
Time and place of regularly sch	heduled board meetings for public participation:	The Board of Directors	of the TSRWCo meet
at the Del Mar Center as neede	ed. All Meetings are noticed in the monthly Associa	tion Bulletin and posted of	on the Association's Website.

TERMS USED IN THIS REPORT:

level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

For more information, contact: Frank Bell, Chief Executive Officer

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected risk to health. MRDLGs are set by the U.S. Environmental Protection Agency.

Maximum Contaminant Level (MCL): The highest Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Phone: (707)785-2444

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Variances and Exemptions: Department permission to exceed an MCL or not comply with a treatment technique under certain conditions.

ND: not detectable at testing limit

ppm: parts per million or milligrams per liter (mg/L)

ppb: parts per billion or micrograms per liter (ug/L)

ppt: parts per trillion or nanograms per liter (ng/L)

pCi/L: picocuries per liter (a measure of radiation)

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

2006 SWS CCR Form Revised Jan 2007

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the state Department of Health Services (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Tables 1, 2, 3, 4, and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

TABLE 1 - SAMPLING RESULTS SHOWING THE DETECTION OF COLIFORM BACTERIA							
Microbiological Contaminants (to be completed only if there was a detection of bacteria)	Highest No. of detections	No. of months in violation	МС	L	MCLG	Typical Source of Bacteria	
Total Coliform Bacteria	(In a mo.)	0	More than 1 sample in a month with a detection		0	Naturally present in the environment	
Fecal Coliform or E. coli	(In the year)	0	A routine sample and a repeat sample detect total coliform and either sample also detects fecal coliform or <i>E. coli</i>		0	Human and animal fecal waste	
TABLE 2 - SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER							
Lead and Copper (to be completed only if there was a detection of lead or copper in the last sample set)	No. of samples collected	90 th percentile level detected	No. sites exceeding AL	AL	PHG	Typical Source of Contaminant	
Lead (ppb) 2014	10	0.005	0	0.015	2	Internal corrosion of household water plumbing systems; discharges from industrial manufacturers; erosion of natural deposits	
Copper (ppm) 2014	10	1.3	1	1.3	0.17	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	
TABLE 3 - SAMPLING RESULTS FOR SODIUM AND HARDNESS							
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant	
Sodium (ppm)	5/6/14	14	14	none	none	Generally found in ground & surface water	
	1		•	1	i e	1	

^{*}Any violation of an MCL or AL is marked with an asterisk. Additional information regarding the violation is provided later in this report.

5/6/14

2006 SWS CCR Form Revised Jan 2007

none

none

Generally found in ground & surface water

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Source of Contaminant
Fluoride (ppm)	5/6/14	0.14	0.14	2	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories
Nitrate (ppm)	2/10/14	4.7	4.7	45	45	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Haloacetic Acids (ppb)	Semi Annual	35.5	7.7-29	60	N/A	Byproduct of drinking water chlorination.
Total Trihalomethanes (ppb)	Semi Annual	45	23.9-47.8	80	N/A	Byproduct of drinking water chlorination.
Chlorine (ppm)	Daily	0.80	0.62-1.0	MRDL = 4.0	N/A	Drinking water disinfectant added for treatment
TABLE 5 - DETEC	CTION OF C	ONTAMIN	ANTS WITH	A <u>SECONI</u>	DARY DRIN	KING WATER STANDARD
Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Source of Contaminant
Sulfate (ppm)	5/6/14	12	12	500	N/A	Runoff/leaching from natural deposits; industrial wastes.
Odor (units)	3/26/12	<1.0	<1.0	3	N/A	Naturally occurring organic materials.
Turbidity (NTU units)	3/26/12	*12	12	5	N/A	Soil runoff.
Chloride (ppm)	5/6/14	8.9	8.9	500	N/A	Runoff/leaching from natural deposits. Sea water influence
Color (units)	3/26/12	*30	30	15	N/A	Naturally occurring organic material.
	TABLE 6	- DETECTI	ON OF UNR	EGULATEI	O CONTAMI	NANTS
Chemical or Constituent (and reporting units) None	Sample Dat	te Leve Detec	-	Lification Level		Health Effects Language

^{*}Any violation of an MCL, MRDL, or TT is asterisked. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

2006 SWS CCR Form Revised Jan 2007

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

ND = Not Detected		
Note: $@ = 5.4$ grains of hardness.		

Summary Information for Contaminants Exceeding an MCL, MRDL, or AL, or a Violation of Any Treatment Technique or Monitoring and Reporting Requirement

The water being produced by the wells located at the Hot Spot and the Water Treatment Plant located at the north end of Deer Trail Road contains no constituent levels that are of concern to any regulatory agency. The Color and Turbidity high reading were due to a sampling error.

For Systems Providing Surface Water as a Source Of Drinking Water:

(Refer to page 1, "Type of water source in use" to see if your source of water is surface water or groundwater)

TABLE 7 - SAMPLING RESULTS SHOWING TREATMENT OF SURFACE WATER SOURCES			
Treatment Technique (a) (Type of approved filtration technology used)	Coagulation, tri-media filtration and disinfection.		
Turbidity Performance Standards (b)* (that must be met through the water treatment process)	Turbidity of the filtered water must: 1 – Be less than or equal to 0.2 NTU in 95% of measurements in a month. 2 – Not exceed 1.0 NTU for more than eight consecutive hours. 3 – Not exceed 5.0 NTU at any time.		
Lowest monthly percentage of samples that met Turbidity Performance Standard No. 1.	100 %		
Highest single turbidity measurement during the year	0.20 NTU		
Number of violations of any surface water treatment requirements	None.		

⁽a) A required process intended to reduce the level of a contaminant in drinking water.

Summary Information for Surface Water Treatment

Note: The Water T	Freatment plant operated within its design requirements.	

2006 SWS CCR Form Revised Jan 2007

⁽b) Turbidity (measured in NTU) is a measurement of the cloudiness of water and is a good indicator of water quality and filtration performance. Turbidity results which meet performance standards are considered to be in compliance with filtration requirements.
